

A home for diggers

A home for diggers is a portable mini sandarium for subterranean pollinators. It requires only little space and can therefore be placed even on small balconies.

Material:

Material	Quantity	Measurements	
Clay pot	1	Minimum size: height: 15 cm, diameter: 30 cm, with a drain hole	✓
Clay shards			
Cactus soil		Slightly fertilized cactus soil or a self made mixture: one part clay, one part fine sand, one part sowing soil	
Stones and stonecrop		For decorativeal purposes	

Construction:

Before you start, please read the general construction and maintenance rules and keep them in mind.

1. For a good water drain place the clay shards at the bottom of the empty pot.
2. Then add the soil.
3. You can decorate the mini sandarium with the stones and a stonecrop. But make sure that just a small part of the soil is covered.
4. Place the pot on a sunny and protected site and water it occasionally and carefully.
